XX Humanised antibody, Vitaxin, that binds selectively to alphaVbeta3
PT integrin - and related grafted antibodies based on murine monoclonal
PT LM609, also related nucleic acid, used to treat, prevent or diagnose
PT angiogenesis or restenosis
XX
XX Claim 62; Page 41; 129pp; English.
PS
XX AAW76007-W76040 are protein fragments of the grafted monoclonal antibody
CC LM609 heavy and light chain variable region. LM609 and the antibody
CC vitaxin bind selectively to integrin alphavbeta3 and can be used to
CC inhibit binding of alphavbeta3 to a ligand and thus block
CC integrin-mediated signal transduction. This is useful in the treatment,
CC prevention and diagnosis of alphavbeta3-mediated disease, specifically
CC angiogenesis and restenosis (but also e.g. (non-)immune inflammation,
CC diabetic retinopathy, neovascular glaucoma, cancer, psoriasis,
CC rheumatoid arthritis, macular degeneration, osteoporosis etc.). The
CC antibodies contain non-murine framework regions so are suitable for use
CC in humans. Enhanced types of LM609 have affinity more than 90 times
CC greater than that of parent the parent antibody.

XX Enhanced LM609 grafted antibodies exhibiting selective binding affinity
XX to alpha(V)beta(3) integrin, useful in the diagnosis and treatment of
PT angiogenesis, inflammatory diseases e.g. psoriasis, cancers and
PT osteoporosis -
PT
XX Disclosure; Page 41; 132pp; English.
PS
XX The present invention relates to enhanced LM609 grafted antibodies
CC exhibiting selective binding affinity to alphaVbeta3 integrin or
CC their functional fragments. The antibodies or their functional
CC fragments can be used in the diagnosis and treatment of
CC alphaVbeta3-mediated diseases such as angiogenesis, inflammatory

CC diseases (such as psoriasis and chronic articular rheumatism),
CC disorders associated with inappropriate or inopportune invasion of
CC vessels (such as diabetic retinopathy, neovascular glaucoma and
CC cancer disorders such as tumours and Kaposi's sarcoma), retinal
CC diseases (such as macular degeneration), restenosis and
CC osteoporosis.

XX Humanised antibody, Vitaxin, that binds selectively to alphaVbeta3
PT integrin - and related grafted antibodies based on murine monoclonal
PT LM609, also related nucleic acid, used to treat, prevent or diagnose
PT angiogenesis or restenosis
XX
XX Claim 62; Page 41; 129pp; English.
PS
XX AAW76007-W76040 are protein fragments of the grafted monoclonal antibody
CC LM609 heavy and light chain variable region. LM609 and the antibody
CC vitaxin bind selectively to integrin alphavbeta3 and can be used to
CC inhibit binding of alphavbeta3 to a ligand and thus block
CC integrin-mediated signal transduction. This is useful in the treatment,
CC prevention and diagnosis of alphavbeta3-mediated disease, specifically
CC angiogenesis and restenosis (but also e.g. (non-)immune inflammation,
CC diabetic retinopathy, neovascular glaucoma, cancer, psoriasis,
CC rheumatoid arthritis, macular degeneration, osteoporosis etc.). The
CC antibodies contain non-murine framework regions so are suitable for use
CC in humans. Enhanced types of LM609 have affinity more than 90 times
CC greater than that of parent the parent antibody.

XX
PS Disclosure; Page 41; 132pp; English.
XX
CC The present invention relates to enhanced LM609 grafted antibodies
CC exhibiting selective binding affinity to alphavbeta_3 integrin or
CC their functional fragments. The antibodies or their functional
CC fragments can be used in the diagnosis and treatment of
CC alphavbeta_3-mediated diseases such as angiogenesis, inflammatory
CC diseases (such as psoriasis and chronic articular rheumatism),
CC disorders associated with inappropriate or inopportune invasion of
CC vessels (such as diabetic retinopathy, neovascular glaucoma and
CC cancer disorders such as tumours and Kaposi's sarcoma), retinal
CC diseases (such as macular degeneration), restenosis and
CC osteoporosis.

XX Enhanced LM609 grafted antibodies exhibiting selective binding affinity
PT to alpha(V)beta(3) integrin, useful in the diagnosis and treatment of
PT angiogenesis, inflammatory diseases e.g. psoriasis, cancers and
PT osteoporosis -
XX Disclosure; Page 41; 132pp; English.
XX

XX The present invention relates to enhanced LM609 grafted antibodies
CC exhibiting selective binding affinity to alphaVbeta₃ integrin or
CC their functional fragments. The antibodies or their functional
CC fragments can be used in the diagnosis and treatment of
CC alphaVbeta₃-mediated diseases such as angiogenesis, inflammatory
CC diseases (such as psoriasis and chronic articular rheumatism),
CC disorders associated with inappropriate or inopportune invasion of
CC vessels (such as diabetic retinopathy, neovascular glaucoma and
CC cancer disorders such as tumours and Kaposi's sarcoma), retinal
CC diseases (such as macular degeneration), restenosis and
CC osteoporosis.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

RL  Nature 415:871-880(2002)
CC  -1- FUNCTION: PROTEIN KINASE THAT ACTS BOTH ON SERINES AND ON
CC  TYROSINES. IT ACTS AS A NEGATIVE REGULATOR OF ENTRY INTO MITOSIS
CC  (G2 TO M TRANSITION). PHOSPHORYLATES AND INHIBITS CDC2.
CC  -1- SIMILARITY: BELONGS TO THE SER/THR FAMILY OF PROTEIN KINASES.
CC  WEEL SUBFAMILY.

XX Humanised antibody, Vitaxin, that binds selectively to alphavbeta3
PT integrin - and related grafted antibodies based on murine monoclonal
PT LM609, also related nucleic acid, used to treat, prevent or diagnose
PT angiogenesis or restenosis
XX Claim 62; Page 41; 129pp; English.
XX
XX AAW76007-W76040 are protein fragments of the grafted monoclonal antibody
CC LM609 heavy and light chain variable region. LM609 and the antibody
CC vitaxin bind selectively to integrin alphavbeta3 and can be used to
CC inhibit binding of alphavbeta3 to a ligand and thus block
CC integrin-mediated signal transduction. This is useful in the treatment,
CC prevention and diagnosis of alphavbeta3-mediated disease, specifically
CC angiogenesis and restenosis (but also e.g. (non-)immune inflammation,
CC diabetic retinopathy, neovascular glaucoma, cancer, psoriasis,
CC rheumatoid arthritis, macular degeneration, osteoporosis etc.). The
CC antibodies contain non-murine framework regions so are suitable for use
CC in humans. Enhanced types of LM609 have affinity more than 90 times
CC greater than that of parent the parent antibody.

XX
XX Disclosure; Page 41; 132pp; English.
XX
XX The present invention relates to enhanced LM609 grafted antibodies
CC exhibiting selective binding affinity to alphavbeta_3 integrin or
CC their functional fragments. The antibodies or their functional
CC fragments can be used in the diagnosis and treatment of
CC alphavbeta_3-mediated diseases such as angiogenesis, inflammatory

CC diseases (such as psoriasis and chronic articular rheumatism),
CC disorders associated with inappropriate or inopportune invasion of
CC vessels (such as diabetic retinopathy, neovascular glaucoma and
CC cancer disorders such as tumours and Kaposi's sarcoma), retinal
CC diseases (such as macular degeneration), restenosis and
CC osteoporosis.

 CC rheumatoid arthritis, macular degeneration, osteoporosis etc.). The
 CC antibodies contain non-murine framework regions so are suitable for use
 CC in humans. Enhanced types of LM609 have affinity more than 90 times
 CC greater than that of parent the parent antibody.

 PT angiogenesis, inflammatory diseases e.g. psoriasis, cancers and
 PT osteoporosis -

XX Disclosure; Page 39; 132pp; English.

XX The present invention relates to enhanced LM609 grafted antibodies
 CC exhibiting selective binding affinity to alphavbeta_3 integrin or
 CC their functional fragments. The antibodies or their functional
 CC fragments can be used in the diagnosis and treatment of
 CC alphavbeta_3-mediated diseases such as angiogenesis, inflammatory
 CC diseases (such as psoriasis and chronic articular rheumatism),
 CC disorders associated with inappropriate or inopportune invasion of
 CC vessels (such as diabetic retinopathy, neovascular glaucoma and
 CC cancer disorders such as tumours and Kaposi's sarcoma), retinal
 CC diseases (such as macular degeneration), restenosis and
 CC osteoporosis.

XX Humanised antibody, Vitaxin, that binds selectively to alphavbeta3
PT integrin - and related grafted antibodies based on murine monoclonal
PT LM609, also related nucleic acid, used to treat, prevent or diagnose
PT angiogenesis or restenosis
XX
XX
PS Claim 62; Page 41; 129pp; English.
XX
XX AAW76007-W76040 are protein fragments of the grafted monoclonal antibody
CC LM609 heavy and light chain variable region. LM609 and the antibody
CC vitaxin bind selectively to integrin alphavbeta3 and can be used to
CC inhibit binding of alphavbeta3 to a ligand and thus block
CC integrin-mediated signal transduction. This is useful in the treatment,
CC prevention and diagnosis of alphavbeta3-mediated disease, specifically
CC angiogenesis and restenosis (but also e.g. (non-)immune inflammation,
CC diabetic retinopathy, neovascular glaucoma, cancer, psoriasis,
CC rheumatoid arthritis, macular degeneration, osteoporosis etc.). The
CC antibodies contain non-murine framework regions so are suitable for use
CC in humans. Enhanced types of LM609 have affinity more than 90 times
CC greater than that of parent the parent antibody.

XX
XX Enhanced LM609 grafted antibodies exhibiting selective binding affinity
PT to alpha(V)beta(3) integrin, useful in the diagnosis and treatment of
PT angiogenesis, inflammatory diseases e.g. psoriasis, cancers and
PT osteoporosis -
XX
XX Disclosure; Page 41; 132pp; English.
XX
XX The present invention relates to enhanced LM609 grafted antibodies
CC exhibiting selective binding affinity to alphavbeta_3 integrin or
CC their functional fragments. The antibodies or their functional
CC fragments can be used in the diagnosis and treatment of
CC alphavbeta_3-mediated diseases such as angiogenesis, inflammatory

CC diseases (such as psoriasis and chronic articular rheumatism),
CC disorders associated with inappropriate or inopportune invasion of
CC vessels (such as diabetic retinopathy, neovascular glaucoma and
CC cancer disorders such as tumours and Kaposi's sarcoma), retinal
CC diseases (such as macular degeneration), restenosis and
CC osteoporosis.

XX AAW76007-W76040 are protein fragments of the grafted monoclonal antibody
CC LM609 heavy and light chain variable region. LM609 and the antibody
CC vitaxin bind selectively to integrin alphavbeta3 and can be used to
CC inhibit binding of alphavbeta3 to a ligand and thus block
CC integrin-mediated signal transduction. This is useful in the treatment,
CC prevention and diagnosis of alphavbeta3-mediated disease, specifically
CC angiogenesis and restenosis (but also e.g. (non-)immune inflammation,
CC diabetic retinopathy, neovascular glaucoma, cancer, psoriasis,
CC rheumatoid arthritis, macular degeneration, osteoporosis etc.). The
CC antibodies contain non-murine framework regions so are suitable for use
CC in humans. Enhanced types of LM609 have affinity more than 90 times
CC greater than that of parent the parent antibody.

Enhanced LM609 grafted antibodies exhibiting selective binding affinity to alpha(V)beta(3) integrin, useful in the diagnosis and treatment of angiogenesis, inflammatory diseases e.g. psoriasis, cancers and osteoporosis.

PS Disclosure; Page 41; 132pp; English.

The present invention relates to enhanced LM609 grafted antibodies exhibiting selective binding affinity to alphavbeta_3 integrin or their functional fragments. The antibodies or their functional fragments can be used in the diagnosis and treatment of diseases (such as psoriasis and chronic articular rheumatism), disorders associated with inappropriate or inopportune invasion of vessels (such as diabetic retinopathy, neovascular glaucoma and cancer disorders such as tumours and Kaposi's sarcoma), retinal osteoporosis.

XX Humanised antibody, Vitaxin, that binds selectively to alphaVbeta3
PT integrin - and related grafted antibodies based on murine monoclonal
PT LM609, also related nucleic acid, used to treat, prevent or diagnose
PT angiogenesis or restenosis
XX
XX Claim 62; Page 41; 129pp; English.
XX
XX AAW76007-W76040 are protein fragments of the grafted monoclonal antibody
CC LM609 heavy and light chain variable region. LM609 and the antibody
CC vitaxin bind selectively to integrin alphavbeta3 and can be used to
CC inhibit binding of alphavbeta3 to a ligand and thus block
CC integrin-mediated signal transduction. This is useful in the treatment,
CC prevention and diagnosis of alphavbeta3-mediated disease, specifically
CC angiogenesis and restenosis (but also e.g. (non-)immune inflammation,
CC diabetic retinopathy, neovascular glaucoma, cancer, psoriasis,
CC rheumatoid arthritis, macular degeneration, osteoporosis etc.). The
CC antibodies contain non-murine framework regions so are suitable for use
CC in humans. Enhanced types of LM609 have affinity more than 90 times
CC greater than that of parent the parent antibody.

PT to alpha(V)beta(3) integrin, useful in the diagnosis and treatment of
PT angiogenesis, inflammatory diseases e.g. psoriasis, cancers and
PT osteoporosis -
XX
XX Disclosure; Page 41; 132pp; English.
PS
XX The present invention relates to enhanced LM609 grafted antibodies
CC exhibiting selective binding affinity to alphaVbeta_3 integrin or
CC their functional fragments. The antibodies or their functional
CC fragments can be used in the diagnosis and treatment of
CC alphavbeta_3-mediated diseases such as angiogenesis, inflammatory

CC diseases (such as psoriasis and chronic articular rheumatism),
CC disorders associated with inappropriate or inopportune invasion of
CC vessels (such as diabetic retinopathy, neovascular glaucoma and
CC cancer disorders such as tumours and Kaposi's sarcoma), retinal
CC diseases (such as macular degeneration), restenosis and
CC osteoporosis.

PS
XX
XX The present invention relates to enhanced LM609 grafted antibodies
CC exhibiting selective binding affinity to alphavbeta_3 integrin or

```

CC their functional fragments. The antibodies or their functional
 CC fragments can be used in the diagnosis and treatment of
 CC alphavbeta_3-mediated diseases such as angiogenesis, inflammatory
 CC diseases (such as psoriasis and chronic articular rheumatism),
 CC disorders associated with inappropriate or inopportune invasion of
 CC vessels (such as diabetic retinopathy, neovascular glaucoma and
 CC cancer disorders such as tumours and Kaposi's sarcoma), retinal
 CC diseases (such as macular degeneration), restenosis and
 CC osteoporosis.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

XX Humanised antibody, Vitaxin, that binds selectively to alphavbeta3
PT integrin - and related grafted antibodies based on murine monoclonal
PT LM609, also related nucleic acid, used to treat, prevent or diagnose
PT angiogenesis or restenosis
XX
XX Claim 62; Page 41; 129pp; English.
PS
CC AAW76007-W76040 are protein fragments of the grafted monoclonal antibody
CC LM609 heavy and light chain variable region. LM609 and the antibody
CC vitaxin bind selectively to integrin alphavbeta3 and can be used to
CC inhibit binding of alphavbeta3 to a ligand and thus block
CC integrin-mediated signal transduction. This is useful in the treatment,
CC prevention and diagnosis of alphavbeta3-mediated disease, specifically
CC angiogenesis and restenosis (but also e.g. (non-)immune inflammation,
CC diabetic retinopathy, neovascular glaucoma, cancer, psoriasis,
CC rheumatoid arthritis, macular degeneration, osteoporosis etc.). The
CC antibodies contain non-murine framework regions so are suitable for use
CC in humans. Enhanced types of LM609 have affinity more than 90 times
CC greater than that of parent the parent antibody.

PS
XX The present invention relates to enhanced LM609 grafted antibodies
XX exhibiting selective binding affinity to alphavbeta3 integrin or
CC their functional fragments. The antibodies or their functional
CC fragments can be used in the diagnosis and treatment of
CC alphavbeta3-mediated diseases such as angiogenesis, inflammatory

CC diseases (such as psoriasis and chronic articular rheumatism),
CC disorders associated with inappropriate or inopportune invasion of
CC vessels (such as diabetic retinopathy, neovascular glaucoma and
CC cancer disorders such as tumours and Kaposi's sarcoma), retinal
CC diseases (such as macular degeneration), restenosis and
CC osteoporosis.

XX
XX AAW76007-W76040 are protein fragments of the grafted monoclonal antibody
XX LM609 heavy and light chain variable region. LM609 and the antibody
XX vitaxin bind selectively to integrin alphavbeta3 and can be used to
XX inhibit binding of alphavbeta3 to a ligand and thus block
XX integrin-mediated signal transduction. This is useful in the treatment,
XX prevention and diagnosis of alphavbeta3-mediated disease, specifically
XX angiogenesis and restenosis (but also e.g. (non-)immune inflammation,
XX diabetic retinopathy, neovascular glaucoma, cancer, psoriasis,
XX rheumatoid arthritis, macular degeneration, osteoporosis etc.). The
XX antibodies contain non-murine framework regions so are suitable for use
XX in humans. Enhanced types of LM609 have affinity more than 90 times
XX greater than that of parent the parent antibody.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

XX Humanised antibody, Vitaxin, that binds selectively to alphavbeta3
PT integrin - and related grafted antibodies based on murine monoclonal
PT LM609, also related nucleic acid, used to treat, prevent or diagnose
PT angiogenesis or restenosis
XX
XX Claim 62; Page 41; 129pp; English.
PS
XX AAW76007-w76040 are protein fragments of the grafted monoclonal antibody
CC LM609 heavy and light chain variable region. LM609 and the antibody
CC vitaxin bind selectively to integrin alphavbeta3 and can be used to
CC inhibit binding of alphavbeta3 to a ligand and thus block
CC integrin-mediated signal transduction. This is useful in the treatment,
CC prevention and diagnosis of alphavbeta3-mediated disease, specifically
CC angiogenesis and restenosis (but also e.g. (non-)immune inflammation,
CC diabetic retinopathy, neovascular glaucoma, cancer, psoriasis,
CC rheumatoid arthritis, macular degeneration, osteoporosis etc.). The
CC antibodies contain non-murine framework regions so are suitable for use
CC in humans. Enhanced types of LM609 have affinity more than 90 times
CC greater than that of parent the parent antibody.

PS
XX The present invention relates to enhanced LM609 grafted antibodies
CC exhibiting selective binding affinity to alphavbeta3 integrin or
CC their functional fragments. The antibodies or their functional
CC fragments can be used in the diagnosis and treatment of
CC alphavbeta3-mediated diseases such as angiogenesis, inflammatory

CC diseases (such as psoriasis and chronic articular rheumatism),
CC disorders associated with inappropriate or inopportune invasion of
CC vessels (such as diabetic retinopathy, neovascular glaucoma and
CC cancer disorders such as tumours and Kaposi's sarcoma), retinal
CC diseases (such as macular degeneration), restenosis and
CC osteoporosis.

PT disease -
XX
XX Example 5; Page 149-150; 193pp; English.
PS
XX The present invention describes a fusion protein (I) comprising at least
CC one binding domain specifically recognising an epitope of a plant
CC pathogen and at least one further domain comprising a protein or peptide
CC sequence which is toxic to the pathogen or detrimental to its
CC replication, transmission or life cycle. Also described is a
CC pathogenicide (II) comprising (I) and a cellular targeting sequence
CC and/or membrane localisation sequence and/or motif that leads to
CC membrane anchoring; or at least one binding domain that specifically
CC recognises a viral movement and/or replicase protein. The fusion
CC protein, pathogenicide, polynucleotide, vectors, and compositions from
CC the present invention are useful for the protection of a plant against
CC the action of a pathogen. The kit from the present invention is useful
CC for carrying out the methods and may be employed in different
CC applications, for example in the diagnostic field or as research tools.
CC The kit or its components, such as the fusion protein, pathogenicide,
CC polynucleotides, vectors or compositions are useful in plant cell and

CC plant tissue culture, in agriculture. They are extremely useful for
 CC breeding new varieties of plants that display improved properties such as
 CC resistance to pathogens. AAS56587 to AAS56702 and AAB09774 to B097820
 CC represent sequences used in the exemplification of the present
 CC invention.

XX Humanised antibody, Vitaxin, that binds selectively to alphavbeta3
XX integrin - and related grafted antibodies based on murine monoclonal
XX LM609, also related nucleic acid, used to treat, prevent or diagnose
XX angiogenesis or restenosis
XX
XX Claim 1; Fig 1b; 129pp; English.
XX
XX This sequence represents the vitaxin antibody variable light chain
XX region. Vitaxin and the antibody LM609 bind selectively to integrin
XX alphavbeta3 and can be used to inhibit binding of alphavbeta3 to a
XX ligand and thus block integrin-mediated signal transduction. This is
XX useful in the treatment, prevention and diagnosis of alphavbeta3-mediated
XX disease, specifically angiogenesis and restenosis (but also e.g.
XX (non-)immune inflammation, diabetic retinopathy, neovascular glaucoma,
XX cancer, psoriasis, rheumatoid arthritis, macular degeneration,
XX osteoporosis etc.). The antibodies contain non-murine framework regions
XX so are suitable for use in humans. Enhanced types of LM609 have affinity
XX more than 90 times greater than that of parent the parent antibody.

XX New LM609 grafted antibody exhibiting selective binding affinity to
PT alphavbeta3, comprising at least one LM609 grafted heavy and light
PT chain polypeptide, useful for diagnosing and treating e.g. inflammatory
PT disorders or cancer
XX
PS Disclosure; Fig 2B; 25pp; English.
XX
CC The present sequence represents the light chain variable region of the
CC monoclonal antibody LM609. LM609 is a murine antibody which specifically
CC recognises the integrin alphavbeta3, and inhibits its functional activity.
CC The specification describes a LM609 grafted antibody which has the
CC complementarity determining regions (CDRs) substituted into a non-murine
CC framework. Nucleic acids encoding LM609 grafted heavy and light chain
CC polypeptides and fragments are useful in diagnostic and therapeutic
CC purposes, such as in the production of LM609 grafted antibodies and
CC fragments having binding specificity and inhibitory activity against
CC the integrin alphavbeta3. The antibody can be used for the diagnosis
CC or treatment of alphavbeta3-mediated diseases (e.g. inflammatory
CC disorders, chronic articular rheumatism, psoriasis, disorders
CC associated with inappropriate or inopportune invasion of vessels such
CC as diabetic retinopathy, neovascular glaucoma and capillary
CC proliferation in atherosclerotic plaques, or cancers), and to inhibit
CC binding activity of alphavbeta3 that are necessary for progression of
CC an alphavbeta3-mediated disease.

PT immunotherapeutic treatment of e.g. diabetic retinopathy,
PT inflammatory disorders, atherosclerosis, restenosis, cancers or
PT osteoporosis
XX
XX Example 14; Page 68-69; 97pp; English.
XX
XX This is the amino acid sequence of the light chain variable region
CC (VL) of humanised anti-alpha_v beta_3 vitronectin receptor
CC monoclonal antibody D12HZLCREI. It is based on a synthetic
CC humanised kappa chain based on a modified human REI kappa
CC framework and complementarity determining regions from the murine
CC anti-human alpha_v beta_3 vitronectin receptor monoclonal antibody
CC D12 (see AAW84094). Humanised antibodies of the invention can be used
CC for passive immunotherapy of a disorder mediated by the alpha_v
CC beta_3 receptor, e.g. cardiovascular disorders or angiogenic-
CC related disorders, such as angiogenesis associated with diabetic
CC retinopathy, atherosclerosis and restenosis, chronic inflammatory
CC disorders, macular degeneration, rheumatoid arthritis and cancer,
CC e.g. solid tumour metastasis, and diseases where bone resorption is
CC associated with pathology such as osteoporosis, hyperparathyroidism,
CC Paget's disease, hypercalcaemia of malignancy, osteolytic lesions
CC produced by bone metastasis, bone loss due to immobilisation or sex
CC hormone deficiency. They can also be used for targeted drug
CC therapy, and for detection and diagnosis.

CC -|- FUNCTION: CYTOPLASMIC INCLUSION PROTEIN HAS HELICASE ACTIVITY. IT

CC MAY BE INVOLVED IN REPLICATION.

CC -1- FUNCTION: NUCLEAR INCLUSION PROTEIN A HAS PROTEOLYTIC ACTIVITY.

CC -1- CATALYTIC ACTIVITY: Hydrolyzes glutamyl bonds, and activity is

CC further restricted by preferences for the amino acids in p6 - p1,

CC that vary with the species of potyvirus, e.g. Glu-Xaa-Xaa-Tyr-Xaa-

CC Gln+(Ser or Gly) for the enzyme from tobacco etch virus. The

CC natural substrate is the viral polyprotein, but other proteins and

CC oligopeptides containing the appropriate consensus sequence are

CC also cleaved.

CC -1- CATALYTIC ACTIVITY: N nucleoside triphosphate = N diphosphate +

CC {RNA}(N).

CC -1- CATALYTIC ACTIVITY: Hydrolyzes a Gly-I-Gly bond at its own C-

CC terminus, commonly in the sequence -Tyr-Xaa-Val-Gly-I-Gly, in the

CC processing of the potyviral polyprotein.

CC -1- PTM: VPG IS COVALENTLY LINKED TO THE GENOMIC RNA.

CC -1- PTM: THE VIRAL RNA OF POTYVIRUSES IS EXPRESSED AS A SINGLE

CC POLYPROTEIN WHICH UNDERGOES POSTTRANSLATIONAL PROTEOLYTIC

CC PROCESSING RESULTING IN THE PRODUCTION OF AT LEAST EIGHT

CC INDIVIDUAL PROTEINS.

CC -1- SIMILARITY: HC PROTEINASE BELONGS TO PEPTIDASE FAMILY C6.

CC -1- SIMILARITY: NI-A PROTEINASE BELONGS TO PEPTIDASE FAMILY C4.

CC -1- SIMILARITY: BELONGS TO THE POTYVIRUSES POLYPROTEIN FAMILY.

 DE component proteinase (EC 3.4.22.45) (HC-Pro); Protein P3; 6 kDa
 DE protein 1 (6K1); Cytoplasmic inclusion protein (CI); 6 kDa protein 2
 DE (6K2); Genome-linked protein (VP6); Nuclear inclusion protein A (NI-A)
 DE (NIA) (EC 3.4.22.44) (49 kDa-proteinase) (49 kDa-Pro); Nuclear
 DE inclusion protein B (NI-B) (NIB) (RNA-directed RNA polymerase)
 DE (EC 2.7.7.48); Coat protein (CP)].
 OS Soybean mosaic virus (strain G2) (SMV).
 OC Viruses; ssRNA positive-strand viruses, no DNA stage; Potyviridae;
 OC Potyvirus.
 OC NCBI_TaxID=103931;
 RN [1]
 RP SEQUENCE FROM N.A.
 RX MEDLINE=92356085; PubMed=1645142;
 RA Jayaram C., Hill J.H., Miller W.A.;
 RT "Complete nucleotide sequences of two soybean mosaic virus strains
 RT differentiated by response of soybean containing the Rsv resistance
 RL J. Gen. Virol. 73:2067-2077(1992).
 CC -!- FUNCTION: Helper component-proteinase is required for aphid
 CC transmission and also has proteolytic activity.
 CC -!- FUNCTION: Cytoplasmic inclusion protein has helicase activity. It
 CC may be involved in replication.
 CC -!- FUNCTION: Nuclear inclusion protein A has proteolytic activity.
 CC -!- CATALYTIC ACTIVITY: Hydrolyzes a Gly-I-Gly bond at its own C-
 CC terminus, commonly in the sequence -Tyr-Xaa-Val-Gly-I-Gly, in the
 CC processing of the potyviral polyprotein.
 CC -!- CATALYTIC ACTIVITY: Hydrolyzes glutamyl bonds, and activity is
 CC further restricted by preferences for the amino acids in P6 - P1,
 CC that vary with the species of potyvirus, e.g. Glu-Xaa-Xaa-Tyr-Xaa-
 CC Glu-(Ser or Gly) for the enzyme from tobacco etch virus. The
 CC natural substrate is the viral polyprotein, but other proteins and
 CC oligopeptides containing the appropriate consensus sequence are
 CC also cleaved.
 CC -!- CATALYTIC ACTIVITY: N nucleoside triphosphate -> N diphosphate +
 CC (RNA)(N).
 CC -!- PTM: VP6 IS COVALENTLY LINKED TO THE GENOMIC RNA.
 CC -!- PTM: THE VIRAL RNA OF POTYVIRUSES IS EXPRESSED AS A SINGLE
 CC POLYPEPTIDE WHICH UNDERGOES POSTTRANSLATIONAL PROTEOLYTIC
 CC PROCESSING RESULTING IN THE PRODUCTION OF AT LEAST EIGHT
 CC INDIVIDUAL PROTEINS.
 CC -!- SIMILARITY: HC PROTEINASE BELONGS TO PEPTIDASE FAMILY C6.
 CC -!- SIMILARITY: NI-A PROTEINASE BELONGS TO PEPTIDASE FAMILY C4.
 CC -!- SIMILARITY: BELONGS TO THE POTYVIRUSES POLYPEPTIDE FAMILY.

XX Humanised antibody, Vitaxin, that binds selectively to alphavbeta3
PT integrin - and related grafted antibodies based on murine monoclonal
PT LM609, also related nucleic acid, used to treat, prevent or diagnose
PT angiogenesis or restenosis
XX
XX Claim 62; Page 41; 129pp; English.
XX
XX AAW76007-W76040 are protein fragments of the grafted monoclonal antibody
CC LM609 heavy and light chain variable region. LM609 and the antibody
CC vitaxin bind selectively to integrin alphavbeta3 and can be used to
CC inhibit binding of alphavbeta3 to a ligand and thus block
CC integrin-mediated signal transduction. This is useful in the treatment,
CC prevention and diagnosis of alphavbeta3-mediated disease, specifically
CC angiogenesis and restenosis (but also e.g. (non-)immune inflammation,
CC diabetic retinopathy, neovascular glaucoma, cancer, psoriasis,
CC rheumatoid arthritis, macular degeneration, osteoporosis etc.). The
CC antibodies contain non-murine framework regions so are suitable for use
CC in humans. Enhanced types of LM609 have affinity more than 90 times
CC greater than that of parent the parent antibody.

XX
XX The present invention relates to enhanced LM609 grafted antibodies
CC exhibiting selective binding affinity to alphavbeta_3 integrin or
CC their functional fragments. The antibodies or their functional
CC fragments can be used in the diagnosis and treatment of
CC alphavbeta_3-mediated diseases such as angiogenesis, inflammatory

CC diseases (such as psoriasis and chronic articular rheumatism),
CC disorders associated with inappropriate or inopportune invasion of
CC vessels (such as diabetic retinopathy, neovascular glaucoma and
CC cancer disorders such as tumours and Kaposi's sarcoma), retinal
CC diseases (such as macular degeneration), restenosis and
CC osteoporosis.

 PT Antibodies containing donor complementarity determining regions and
 PT non-human primate acceptor frameworks, having reduced immunogenicity in
 PT humans -
 XX
 PS Claim 22; Page 70; 123pp; English.
 XX
 CC The invention provides an antibody (Ab) comprising donor CDRs
 CC (complementarity determining regions) derived from a non-human antigen-
 CC specific donor antibody, and an acceptor framework from a non-human
 CC primate. The Abs are prepared by grafting CDRs from a non-human antigen-
 CC specific donor antibody onto homologous Old World ape or monkey acceptor
 CC frameworks. The Abs have reduced immunogenicity and are better tolerated
 CC in humans (because of the close similarity between the human and primate
 CC proteins), but retain the full antigen-binding affinity of the donor
 CC antibody.

 XX New anti alpha_v beta_3 vitronectin receptor antibodies - used for
 PT immunotherapeutic treatment of e.g. diabetic retinopathy,
 PT inflammatory disorders, atherosclerosis, restenosis, cancers or
 PT osteoporosis
 XX Example 14; Page 68-69; 97pp; English.
 PS This is the amino acid sequence of the light chain variable region
 XX (VL) of humanised anti-alpha-v beta-3 vitronectin receptor
 CC monoclonal antibody D12H2LCREI. It is based on a synthetic

CC humanised kappa chain based on a modified human REI kappa
 CC framework and complementarity determining regions from the murine
 CC anti-human alpha-v beta-3 vitronectin receptor monoclonal antibody
 CC D12 (see AAW84094). Humanised antibodies of the invention can be used
 CC for passive immunotherapy of a disorder mediated by the alpha-v
 CC beta-3 receptor, e.g. cardiovascular disorders or angiogenic-
 CC related disorders, such as angiogenesis associated with diabetic
 CC retinopathy, atherosclerosis and restenosis, chronic inflammatory
 CC disorders, macular degeneration, rheumatoid arthritis and cancer,
 CC e.g. solid tumour metastasis, and diseases where bone resorption is
 CC associated with pathology such as osteoporosis, hyperparathyroidism,
 CC Paget's disease, hypercalcaemia of malignancy, osteolytic lesions
 CC produced by bone metastasis, bone loss due to immobilisation or sex
 CC hormone deficiency. They can also be used for targeted drug
 CC therapy, and for detection and diagnosis.

XX New immunoglobulin(s) having murine CDRs in human framework
 PT regions - have lower antigenicity; useful for treating e.g. HSV,
 PT CMV, T-cell disorders, myeloid disorders and auto-immune
 PT conditions

XX PS Claim 40; Fig 27A; 141pp; English.

XX The sequence shows the humanised mature light chain variable
 CC region of the mouse CMV5 antibody. Murine CDRs were used
 CC in a human Wol framework to produce a pure humanised immunoglobulin
 CC (Ig) which is capable of binding to the gH glycoprotein of
 CC cytomegalovirus. The Ig is non immunogenic, due to the human
 CC framework, and has a strong affinity for its predetermined
 CC antigen. They can be produced in large quantities via recombinant
 CC DNA and monoclonal antibody technology. The humanised Igs may be
 CC used alone or in combination with chemotherapeutic agents such as
 CC non-steroidal anti-inflammatory drugs or immunosuppressants.
 CC See also AAR25721-32.

XX
XX The amino acid sequences of the light and heavy chains of the
CC variable domains from antibodies HYH [HYHEL-10 Fab-lysosyme complex]
CC (AAR38601 and AAR38608, respectively), MCP [IgA Fab
CC MCP603-phosphocholine complex] (AAR38602-03 and AAR38609-10,
CC respectively), NEWM [Ig Fab' NEW] (AAR38604-05 and AAR38611,
CC respectively), and KOL [IgG1 KOL] (AAR38606-07 and AAR38612, respectively)
CC may be used to determine an alignment from which appropriate changes may
CC be made. Unlike other methods of humanisation, which advocate the
CC replacement of entire antibody framework regions with those of human
CC antibodies, this method involves only the introduction of human
CC residues into those positions not critical for antigen binding.
CC This ensures that the binding properties of the modified antibody
CC are not diminished.

PT with humanised variable regions
PT
XX
XX Disclosure; Column 43-44; 77pp; English.
PS
XX
XX A method has been developed of depleting CD5+ cells in an animal. The
CC method comprises administering a cytotoxic protein containing a modified
CC immunoglobulin (Ig) variable domain, where the protein is an anti-CD5 Ig
CC molecule or an immunoconjugate or fusion protein containing an anti-CD5
CC Ig molecule, and where the modified Ig variable domain comprises at
CC least one of (a) a modified light chain variable region (see AAW58478 or
CC AAW58480), and (b) a modified heavy chain variable region (see AAW58479
CC or AAW58481), where AAW58478 and AAW58479 are humanised forms of the H65
CC light and heavy chain variable domains with low risk amino acid
CC substitutions [i.e. low risk of reducing antigen-binding specificity.]
CC and AAW58480 and AAW58481 are humanised forms of the H65 light and heavy
CC chain variable domains with moderate risk amino acid substitutions and
CC are present in humanised H65 antibody he3 (ATCC HB 11206). The method is
CC useful for treating autoimmune diseases, especially systemic lupus
CC erythematosus, rheumatoid arthritis, psoriasis or type I diabetes. The
CC present sequence represents the murine HYH antibody light chain variable
CC domain.

 PT
 XX Claim 2; Page 61-62; 97pp; English.
 PS
 XX This is the amino acid sequence of the light chain variable region
 CC (VL) of humanised anti-alpha-v beta-3 vitronectin receptor
 CC monoclonal antibody D12H2HC 1-0. It is based on the VL sequence
 CC (see AAW84096) of human Kabat subgroup III kappa chain, with
 CC complementarity determining regions (CDRs) from the murine
 CC anti-human alpha-v beta-3 vitronectin receptor monoclonal antibody
 CC D12 (see AAW84093). 3 Murine framework residues (1, 49 and 50)
 CC are retained. The humanised light chain can be expressed in host
 CC cells using nucleic acid molecules (see AAV71800) of the invention.
 CC Humanised D12 VH is also provided (see AAW84097). The humanised
 CC antibodies can be used for passive immunotherapy of disorders
 CC mediated by the alpha-v beta-3 receptor, e.g. cardiovascular or
 CC angiogenic-related disorders, such as angiogenesis associated
 CC with diabetic retinopathy, atherosclerosis and restenosis, chronic
 CC inflammatory disorders, macular degeneration, rheumatoid arthritis
 CC and cancer, e.g. solid tumour metastasis, and diseases where bone
 CC resorption is associated with pathology such as osteoporosis,
 CC hyperparathyroidism, Paget's disease, hypercalcaemia of malignancy,
 CC osteolytic lesions produced by bone metastasis, bone loss due to
 CC immobilisation or sex hormone deficiency. They can also be used for
 CC targeted drug therapy, and for detection and diagnosis.

 XX

PS Claim 14a; Fig 2; 83pp; English.

XX The present sequence is the humanised antibody H24B4k-1, kappa light
 CC chain variable region (VL), specific to human 4-LBB receptor protein.
 CC It comprises of the complementarity determining region (CDR) of mouse
 CC monoclonal antibody (Mab) 4B4-1-1, grafted on to a human antibody. In
 CC order to increase the antigen binding affinity of the humanised antibody,
 CC about 10 critical amino acid substitutions are made in the framework
 CC region (FR) of humanised VL, to resemble the mouse antibody. It functions
 CC to block human 4-LBB protein receptor. The humanised antibody can be used
 CC to treat autoimmune diseases, especially rheumatoid arthritis and for
 CC immune suppression in transplant rejection. It acts as an effective
 CC immunosuppressant, by inhibiting T cell activation, without any adverse
 CC side effects.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

 CC -!- FUNCTION: THIS IS THE RECEPTOR FOR STEM CELL FACTOR (MAST CELL
 CC GROWTH FACTOR). IT HAS A TYROSINE-PROTEIN KINASE ACTIVITY.
 CC BINDING OF THE LIGANDS LEADS TO THE AUTOPHOSPHORYLATION KIT AND
 CC ITS ASSOCIATION WITH SUBSTRATES SUCH AS PHOSPHATIDYLINOSITOL
 CC 3-KINASE (PI3K).
 CC -!- CATALYTIC ACTIVITY: ATP + a protein tyrosine = ADP + protein
 CC tyrosine phosphate.
 CC -!- SUBCELLULAR LOCATION: Type I membrane protein.
 CC -!- SIMILARITY: BELONGS TO THE CSF-1/PDGF RECEPTOR FAMILY OF TYROSINE-
 CC PROTEIN KINASES.
 CC -!- SIMILARITY: CONTAINS 5 IMMUNOGLOBULIN-LIKE C2-TYPE DOMAINS.

CC -!- FUNCTION: TRYPAOTHIONE IS THE PARASITE ANALOG OF GLUTATHIONE;
CC THIS ENZYME IS THE EQUIVALENT OF GLUTATHIONE REDUCTASE.
CC -!- CATALYTIC ACTIVITY: NADPH + trypanothione = NADP(+) + reduced
CC trypanothione.
CC -!- COFACTOR: FAD.
CC -!- SUBUNIT: HOMODIMER.
CC -!- SUBCELLULAR LOCATION: Cytoplasmic.
CC -!- MISCELLANEOUS: THE ACTIVE SITE IS A REDOX-ACTIVE DISULFIDE BOND.
CC -!- SIMILARITY: BELONGS TO THE PYRIDINE NUCLEOTIDE-DISULFIDE
CC OXIDOREDUCTASES CLASS-I.

XX Humanised antibody, Vitaxin, that binds selectively to alphaVbeta3
PT integrin - and related grafted antibodies based on murine monoclonal
PT LM609, also related nucleic acid, used to treat, prevent or diagnose
PT angiogenesis or restenosis
XX
PS Claim 62; Page 41; 129pp; English.
XX
CC AA076007-W76040 are protein fragments of the grafted monoclonal antibody
CC LM609 heavy and light chain variable region. LM609 and the antibody
CC vitaxin bind selectively to integrin alphaVbeta3 and can be used to
CC inhibit binding of alphaVbeta3 to a ligand and thus block
CC integrin-mediated signal transduction. This is useful in the treatment,
CC prevention and diagnosis of alphaVbeta3-mediated disease, specifically
CC angiogenesis and restenosis (but also e.g. (non-)immune inflammation,
CC diabetic retinopathy, neovascular glaucoma, cancer, psoriasis,
CC rheumatoid arthritis, macular degeneration, osteoporosis etc.). The
CC antibodies contain non-murine framework regions so are suitable for use
CC in humans. Enhanced types of LM609 have affinity more than 90 times
CC greater than that of parent the parent antibody.

DR Production of humanized mouse monoclonal antibodies
XX
PT Disclosure; Page 45; 55pp; English.
XX
XX This sequence represents complementarity determining region 3
CC (CDR3) of the light chain of murine monoclonal antibody LM609.
CC LM629 is directed to integrin alpha-v beta-3. It selectively
CC promotes apoptosis of vascular cells stimulated to undergo
CC angiogenesis, making it a tool for cancer diagnosis and therapy.
CC The invention provides humanised antibodies, especially humanised

CC LM609. In such humanized antibodies, a light chain CDR from a
CC mouse antibody such as LM609 is grafted onto a human light chain.
CC and a heavy chain CDR from a mouse antibody is grafted onto a human
CC antibody heavy chain to produce libraries from which a humanised
CC murine antibody having the desired specificity is selected. By
CC preserving the original CDR sequences such as the HCDR3 and LCDR3
CC sequences of LM609, the humanisation strategy ensures epitope
CC conservation.

PT Enhanced LM609 grafted antibodies exhibiting selective binding affinity
PT to alpha(V)beta(3) integrin, useful in the diagnosis and treatment of
PT angiogenesis, inflammatory diseases e.g. psoriasis, cancers and
PT osteoporosis -
XX
PS Disclosure; Page 41; 132pp; English.
XX
XX The present invention relates to enhanced LM609 grafted antibodies
CC exhibiting selective binding affinity to alphaVbeta_3 integrin or
CC their functional fragments. The antibodies or their functional
CC fragments can be used in the diagnosis and treatment of
CC alphaVbeta_3-mediated diseases such as angiogenesis, inflammatory
CC diseases (such as psoriasis and chronic articular rheumatism),
CC disorders associated with inappropriate or inopportune invasion of
CC vessels (such as diabetic retinopathy, neovascular glaucoma and
CC cancer disorders such as tumours and Kaposi's sarcoma), retinal
CC diseases (such as macular degeneration), restenosis and
CC osteoporosis.

XX New immunoglobulin(s) having murine CDRs in human framework
 PT regions - have lower antigenicity; useful for treating e.g. HSV,
 PT CMV, T-cell disorders, myeloid disorders and auto-immune
 PT conditions

XX Claim 40; Fig 27A; 141pp; English.

XX The sequence shows the humanised mature light chain variable
 CC region of the mouse CMV5 antibody. Murine CDRs were used
 CC in a human Wol framework to produce a pure humanised immunoglobulin
 CC (Ig) which is capable of binding to the gH glycoprotein of
 CC cytomegalovirus. The Ig is non immunogenic, due to the human
 CC framework, and has a strong affinity for its predetermined
 CC antigen. They can be produced in large quantities via recombinant
 CC DNA and monoclonal antibody technology. The humanised Igs may be
 CC used alone or in combination with chemotherapeutic agents such as
 CC non-steroidal anti-inflammatory drugs or immunosuppressants.
 CC See also AAR25721-32.

XX Producing humanized immunoglobulin, involves producing a cell
 PT containing DNA segments encoding humanized heavy and light chain
 PT variable regions, and expressing the DNA segments in the cell -
 XX Disclosure; Fig 6; 145pp; English.

XX The present invention describes a method of producing humanised
 CC immunoglobulins involving expressing in a cell a nucleic acid encoding a
 CC humanised version of an immunoglobulin. This is obtained by comparing a
 CC donor and human immunoglobulin and producing a combined antibody which
 CC contains part of each. These are useful in the treatment of
 CC graft-versus-host disease, transplant rejection, autoimmune diseases such
 CC as diabetes, rheumatoid arthritis, myasthenia gravis, multiple sclerosis
 CC and systemic lupus erythematosus, herpes infections, CMV virus infections
 CC and myeloid leukaemia. The present sequence is an antibody used to
 CC demonstrate the method of the invention.

 PT variable regions, and expressing the DNA segments in the cell -
 XX Disclosure; Fig 6; 145pp; English.
 XX The present invention describes a method of producing humanised
 CC immunoglobulins involving expressing in a cell a nucleic acid encoding a
 CC humanised version of an immunoglobulin. This is obtained by comparing a
 CC donor and human immunoglobulin and producing a combined antibody which
 CC contains part of each. These are useful in the treatment of
 CC graft-versus-host disease, transplant rejection, autoimmune diseases such
 CC as diabetes, rheumatoid arthritis, myasthenia gravis, multiple sclerosis
 CC and systemic lupus erythematosus, herpes infections, CMV virus infections
 CC and myeloid leukaemia. The present sequence is an antibody used to
 CC demonstrate the method of the invention.

 XX Humanised antibody, Vitaxin, that binds selectively to alphavbeta3
 PT integrin - and related grafted antibodies based on murine monoclonal
 PT LM609, also related nucleic acid, used to treat, prevent or diagnose
 PT angiogenesis or restenosis
 XX
 XX Disclosure; Page 40; 129pp; English.

CC AAW76007-W76040 are protein fragments of the grafted monoclonal antibody
 CC LM609 heavy and light chain variable region. LM609 and the antibody
 CC vitaxin bind selectively to integrin alphavbeta3 and can be used to
 CC inhibit binding of alphavbeta3 to a ligand and thus block
 CC integrin-mediated signal transduction. This is useful in the treatment,
 CC prevention and diagnosis of alphavbeta3-mediated disease, specifically
 CC angiogenesis and restenosis (but also e.g. (non-)immune inflammation,
 CC diabetic retinopathy, neovascular glaucoma, cancer, psoriasis,
 CC rheumatoid arthritis, macular degeneration, osteoporosis etc.). The
 CC antibodies contain non-murine framework regions so are suitable for use
 CC in humans. Enhanced types of LM609 have affinity more than 90 times
 CC greater than that of parent the parent antibody.

pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

CC -1- FUNCTION: Reduces trimethylamine-N-oxide (TMAO) into
CC trimethylamine; an anaerobic reaction coupled to energy-yielding
CC reactions. Can also reduce other N- and S-oxide compounds such as
CC 4-methylmorpholine-N-oxide and biotin sulfoxide (BSO), but with a
CC lower catalytic efficiency (By similarity).
CC -1- CATALYTIC ACTIVITY: NADH + trimethylamine-N-oxide = NAD(+) +
CC trimethylamine + H(2)O.
CC -1- COFACTOR: Molybdenum (Molybdopterin) (By similarity).
CC -1- SUBCELLULAR LOCATION: Periplasmic (By similarity).
CC -1- MISCELLANEOUS: Expression of torYz allows E.coli to grow
CC anaerobically on a wider range of substrates than does expression
CC of torCAD (By similarity).
CC -1- SIMILARITY: BELONGS TO THE PROKARYOTIC MOLYBDOPTERIN-CONTAINING
CC OXIDOREDUCTASE FAMILY.

XX
CC The present invention relates to enhanced LM609 grafted antibodies
CC exhibiting selective binding affinity to alphavbeta3 integrin or
CC their functional fragments. The antibodies or their functional
CC fragments can be used in the diagnosis and treatment of
CC alphavbeta3-mediated diseases such as angiogenesis, inflammatory

CC diseases (such as psoriasis and chronic articular rheumatism),
CC disorders associated with inappropriate or inopportune invasion of
CC vessels (such as diabetic retinopathy, neovascular glaucoma and
CC cancer disorders such as tumours and Kaposi's sarcoma), retinal
CC diseases (such as macular degeneration), restenosis and
CC osteoporosis.

XX PT Production of humanized mouse monoclonal antibodies

XX PS Disclosure; Page 45; 55pp; English.

XX CC This sequence represents complementarity determining region 3
 CC (LCDR3) of the light chain of murine monoclonal antibody LM609.
 CC LM609 is directed to integrin alpha-v beta-3. It selectively
 CC promotes apoptosis of vascular cells stimulated to undergo
 CC angiogenesis, making it a tool for cancer diagnosis and therapy.
 CC The invention provides humanised antibodies, especially humanised
 CC LM609. In such humanized antibodies, a light chain CDR from a
 CC mouse antibody such as LM609 is grafted onto a human light chain,
 CC and a heavy chain CDR from a mouse antibody is grafted onto a human
 CC antibody heavy chain to produce libraries from which a humanised
 CC murine antibody having the desired specificity is selected. By
 CC preserving the original CDR sequences such as the HCDR3 and LCDR3
 CC sequences of LM609, the humanisation strategy ensures epitope
 CC conservation.

 PT conditions
 XX
 XX Claim 40; Fig 27A; 141pp; English.
 XX
 XX The sequence shows the humanised mature light chain variable
 CC region of the mouse CMV5 antibody. Murine CDRs were used
 CC in a human WOI framework to produce a pure humanised immunoglobulin
 CC (Ig) which is capable of binding to the gH glycoprotein of
 CC cytomegalovirus. The Ig is non immunogenic, due to the human
 CC framework, and has a strong affinity for its predetermined
 CC antigen. They can be produced in large quantities via recombinant
 CC DNA and monoclonal antibody technology. The humanised Igs may be
 CC used alone or in combination with chemotherapeutic agents such as
 CC non-steroidal anti-inflammatory drugs or immunosuppressants.

 PS
 XX This sequence represents the light chain variable region of a
 CC humanised LM609 antibody. LM609 is directed to human integrin
 CC alpha-v beta-3. It selectively promotes apoptosis of vascular
 CC cells that have been stimulated to undergo angiogenesis, making it
 CC a tool for cancer diagnosis and therapy. The invention provides
 CC humanised antibodies, especially humanised LM609. In such humanized

CC antibodies, a light chain CDR from a mouse antibody such as LM609 is
 CC grafted onto a human light chain, and a heavy chain CDR from a mouse
 CC antibody is grafted onto a human antibody heavy chain to produce
 CC libraries from which a humanised murine antibody having the desired
 CC specificity is selected. By preserving the original CDR sequences
 CC such as the HCDR3 and LCDR3 sequences of LM609 (see AAY06371-72), the
 CC humanisation strategy ensures epitope conservation.

XX Producing humanized immunoglobulin, involves producing a cell
 PT containing DNA segments encoding humanized heavy and light chain
 PT variable regions, and expressing the DNA segments in the cell -

XX Example 8; Fig 39; 145pp; English.

XX The present invention describes a method of producing humanised
 CC immunoglobulins involving expressing in a cell a nucleic acid encoding a
 CC humanised version of an immunoglobulin. This is obtained by comparing a
 CC donor and human immunoglobulin and producing a combined antibody which
 CC contains part of each. These are useful in the treatment of
 CC graft-versus-host disease, transplant rejection, autoimmune diseases such
 CC as diabetes, rheumatoid arthritis, myasthenia gravis, multiple sclerosis
 CC and systemic lupus erythematosus, herpes infections, CMV virus infections
 CC and myeloid leukaemia. The present sequence is an antibody used to
 CC demonstrate the method of the invention.

 PT Humanised antibody, Vitaxin, that binds selectively to alphavbeta3
 PT integrin - and related grafted antibodies based on murine monoclonal
 PT LM609, also related nucleic acid, used to treat, prevent or diagnose
 PT angiogenesis or restenosis

XX
 PS Disclosure; Page 40; 129pp; English.

XX
 CC AAW76007-W76040 are protein fragments of the grafted monoclonal antibody
 CC LM609 heavy and light chain variable region. LM609 and the antibody
 CC vitaxin bind selectively to integrin alphavbeta3 and can be used to
 CC inhibit binding of alphavbeta3 to a ligand and thus block
 CC integrin-mediated signal transduction. This is useful in the treatment,
 CC prevention and diagnosis of alphavbeta3-mediated disease, specifically
 CC angiogenesis and restenosis (but also e.g. (non-)immune inflammation,
 CC diabetic retinopathy, neovascular glaucoma, cancer, psoriasis,
 CC rheumatoid arthritis, macular degeneration, osteoporosis etc.). The
 CC antibodies contain non-murine framework regions so are suitable for use
 CC in humans. Enhanced types of LM609 have affinity more than 90 times
 CC greater than that of parent the parent antibody.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

XX Humanised antibody, Vitaxin, that binds selectively to alphaVbeta3
PT integrin - and related grafted antibodies based on murine monoclonal
PT LM609, also related nucleic acid, used to treat, prevent or diagnose
PT angiogenesis or restenosis
XX
PS Claim 62; Page 44; 129pp; English.
XX
XX AA076007-W76040 are protein fragments of the grafted monoclonal antibody
CC LM609 heavy and light chain variable region. LM609 and the antibody
CC vitaxin bind selectively to integrin alphaVbeta3 and can be used to
CC inhibit binding of alphaVbeta3 to a ligand and thus block
CC integrin-mediated signal transduction. This is useful in the treatment,
CC prevention and diagnosis of alphaVbeta3-mediated disease, specifically
CC angiogenesis and restenosis (but also e.g. (non-)immune inflammation,
CC diabetic retinopathy, neovascular glaucoma, cancer, psoriasis,
CC rheumatoid arthritis, macular degeneration, osteoporosis etc.). The
CC antibodies contain non-murine framework regions so are suitable for use
CC in humans. Enhanced types of LM609 have affinity more than 90 times
CC greater than that of parent the parent antibody.

PT to alpha(V)beta(3) integrin, useful in the diagnosis and treatment of
PT angiogenesis, inflammatory diseases e.g. psoriasis, cancers and
PT osteoporosis -
XX
XX Claim 4; Page 41; 132pp; English.
XX
XX The present invention relates to enhanced LM609 grafted antibodies
CC exhibiting selective binding affinity to alphaVbeta3 integrin or
CC their functional fragments. The antibodies or their functional
CC fragments can be used in the diagnosis and treatment of
CC alphaVbeta3-mediated diseases such as angiogenesis, inflammatory

CC diseases (such as psoriasis and chronic articular rheumatism),
CC disorders associated with inappropriate or inopportune invasion of
CC vessels (such as diabetic retinopathy, neovascular glaucoma and
CC cancer disorders such as tumours and Kaposi's sarcoma), retinal
CC diseases (such as macular degeneration), restenosis and
CC osteoporosis.

XX
XX Humanised antibody comprising - CDR region of mouse MAB B-B10
PT specific for IL-2 receptor useful for treating carcinoma
PT expressing IL-2 receptor
XX
XX PS Claim 1; Page 43; 62pp; English.
XX
XX The sequences given in AAR37599-604 represent the complementarity-
CC determining regions (CDRs) of a humanised antibody (Ab) which binds
CC specifically to human interleukin (IL)-2 receptor (hIL2R). These
CC CDRs were derived from the murine anti-human IL-2 receptor monoclonal
CC Ab (MAB) B-B10 (see also AAQ43242-43). This MAB is antagonistic to the
CC binding of IL-2 to the IL-2 receptor on human T-cells. It also
CC inhibits the human mixed lymphocyte reaction. The CDNA encoding the
CC variable (V) region of the B-B10 Ab was cloned by PCR and sequenced
CC (see also AAQ43226-32 and AAQ43233-36). A human Ab with high levels of
CC amino acid sequence homology to the murine sequence was selected and
CC the framework of this Ab was bound with the B-B10 V region CDR and a
CC part of the framework to design several kinds of the humanised B-B10 V
CC region (see also AAQ43244-45). The DNA sequence coding this humanised
CC B-B10 was synthesised and a plasmid expressing humanised B-B10 was
CC constructed.

PT specific for IL-2 receptor useful for treating carcinoma
PT expressing IL-2 receptor
XX Claim 2; Fig 5; 62pp; English.
XX CC The sequences given in AAR37611-12 represent the heavy (H) and light (L)
CC chain variable (V) regions of a humanised antibody (Ab) which binds
CC specifically to human interleukin (IL)-2 receptor (hIL2R). The
CC complementarity-determining regions (CDRs) of these V regions were
CC derived from the murine anti-human IL-2 receptor monoclonal Ab (MAB)
CC B-B10 (see also AAR37599-04). This MAB is antagonistic to the binding
CC of IL-2 to the IL-2 receptor on human T-cells. It also inhibits
CC the human mixed lymphocyte reaction. The cDNA encoding the variable
CC (V) region of the B-B10 Ab was cloned by PCR and sequenced (see also
CC AAQ43226-32 and AAQ43233-36). A human Ab with high levels of amino acid
CC sequence homology to the murine sequence was selected and the
CC framework of this Ab was bound with the B-B10 V region CDR and a
CC part of the framework to design several kinds of the humanised B-B10
CC V region. The DNA sequence coding this humanised B-B10 was
CC synthesised and a plasmid expressing humanised B-B10 was constructed.

CC monoclonal antibody (MAB) B-B10, respectively. This MAB was used in
CC the construction of a humanised antibody (Ab) which binds specifically
CC to human interleukin (IL)-2 receptor (hIL2R). The complementarity-
CC determining regions (CDRs) for the hIL2R MAB were derived from B-B10
CC (see also AAR37599-04). The hIL2R MAB is antagonistic to the binding
CC of IL-2 to the IL-2 receptor on human T-cells. It also inhibits
CC the human mixed lymphocyte reaction. The cDNA encoding the variable
CC (V) region of the B-B10 Ab was cloned by PCR and sequenced (see also
CC AAQ43226-32 and AAQ43233-36). A human Ab with high levels of amino acid
CC sequence homology to the murine sequence was selected and the
CC framework of this Ab was bound with the B-B10 V region CDR and a
CC part of the framework to design several kinds of the humanised B-B10
CC V region. The DNA sequence coding this humanised B-B10 was
CC synthesised and a plasmid expressing humanised B-B10 was constructed.

XX
PS      Claim 1; Fig 1B; 25pp; English.
XX
CC      The present sequence represents the light chain variable region of the
CC      grafted monoclonal antibody LM609. LM609 is a murine antibody which
CC      specifically recognises the integrin alphavbeta3, and inhibits its
CC      functional activity. The LM609 grafted antibody has the
CC      complementarity determining regions (CDRs) substituted into a non-murine
CC      framework. Nucleic acids encoding LM609 grafted heavy and light chain
CC      polypeptides and fragments are useful in diagnostic and therapeutic
CC      purposes, such as in the production of LM609 grafted antibodies and
CC      fragments having binding specificity and inhibitory activity against
CC      the integrin alphavbeta3. The antibody can be used for the diagnosis
CC      or treatment of alphavbeta3-mediated diseases (e.g. inflammatory
CC      disorders, chronic articular rheumatism, psoriasis, disorders
CC      associated with inappropriate or inopportune invasion of vessels such
CC      as diabetic retinopathy, neovascular glaucoma and capillary
CC      proliferation in atherosclerotic plaques, or cancers), and to inhibit
CC      binding activity of alphavbeta3 that are necessary for progression of
CC      an alphavbeta3-mediated disease.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

XX Humanised antibody. Vitaxin, that binds selectively to alphavbeta3
PT integrin - and related grafted antibodies based on murine monoclonal
PT LM609, also related nucleic acid, used to treat, prevent or diagnose
PT angiogenesis or restenosis
XX
XX
XX Claim 62; Page 44; 129pp; English.
XX
XX AAW76007-W76040 are protein fragments of the grafted monoclonal antibody
CC LM609 heavy and light chain variable region. LM609 and the antibody
CC vitaxin bind selectively to integrin alphavbeta3 and can be used to
CC inhibit binding of alphavbeta3 to a ligand and thus block
CC integrin-mediated signal transduction. This is useful in the treatment,
CC prevention and diagnosis of alphavbeta3-mediated disease, specifically
CC angiogenesis and restenosis (but also e.g. (non-)immune inflammation,
CC diabetic retinopathy, neovascular glaucoma, cancer, psoriasis,
CC rheumatoid arthritis, macular degeneration, osteoporosis etc.). The
CC antibodies contain non-murine framework regions so are suitable for use
CC in humans. Enhanced types of LM609 have affinity more than 90 times
CC greater than that of parent the parent antibody.

XX
XX The present invention relates to enhanced LM609 grafted antibodies
CC exhibiting selective binding affinity to alphavbeta_3 integrin or
CC their functional fragments. The antibodies or their functional
CC fragments can be used in the diagnosis and treatment of
CC alphavbeta_3-mediated diseases such as angiogenesis, inflammatory

CC diseases (such as psoriasis and chronic articular rheumatism),
CC disorders associated with inappropriate or inopportune invasion of
CC vessels (such as diabetic retinopathy, neovascular glaucoma and
CC cancer disorders such as tumours and Kaposi's sarcoma), retinal
CC diseases (such as macular degeneration), restenosis and
CC osteoporosis.

XX New LM609 grafted antibody exhibiting selective binding affinity to
PT alphavbeta3, comprising at least one LM609 grafted heavy and light
PT chain polypeptide, useful for diagnosing and treating e.g. inflammatory
PT disorders or cancer -
XX N-PSDB; AAH74624.
PS Claim 1; Fig 1B; 25pp; English.
XX The present sequence represents the light chain variable region of the
CC grafted monoclonal antibody LM609. LM609 is a murine antibody which
CC specifically recognises the integrin alphavbeta3, and inhibits its
CC functional activity. The LM609 grafted antibody has the
CC complementarity determining regions (CDRs) substituted into a non-murine
CC framework. Nucleic acids encoding LM609 grafted heavy and light chain
CC polypeptides and fragments are useful in diagnostic and therapeutic
CC purposes, such as in the production of LM609 grafted antibodies and
CC fragments having binding specificity and inhibitory activity against
CC the integrin alphavbeta3. The antibody can be used for the diagnosis
CC or treatment of alphavbeta3-mediated diseases (e.g. inflammatory
CC disorders, chronic articular rheumatism, psoriasis, disorders
CC associated with inappropriate or inopportune invasion of vessels such
CC as diabetic retinopathy, neovascular glaucoma and capillary
CC proliferation in atherosclerotic plaques, or cancers), and to inhibit
CC binding activity of alphavbeta3 that are necessary for progression of
CC an alphavbeta3-mediated disease.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

XX Humanised antibody, Vitaxin, that binds selectively to alphavbeta3
PT Integrin - and related grafted antibodies based on murine monoclonal
PT LM609, also related nucleic acid, used to treat, prevent or diagnose
PT angiogenesis or restenosis
XX
XX Claim 62; Page 43; 129pp; English.
XX
XX AAW76007-W76040 are protein fragments of the grafted monoclonal antibody
CC LM609 heavy and light chain variable region. LM609 and the antibody
CC vitaxin bind selectively to integrin alphavbeta3 and can be used to
CC inhibit binding of alphavbeta3 to a ligand and thus block
CC integrin-mediated signal transduction. This is useful in the treatment,
CC prevention and diagnosis of alphavbeta3-mediated disease, specifically
CC angiogenesis and restenosis (but also e.g. (non-)immune inflammation,
CC diabetic retinopathy, neovascular glaucoma, cancer, psoriasis,
CC rheumatoid arthritis, macular degeneration, osteoporosis etc.). The
CC antibodies contain non-murine framework regions so are suitable for use
CC in humans. Enhanced types of LM609 have affinity more than 90 times
CC greater than that of parent the parent antibody.

to alpha(V)beta(3) integrin, useful in the diagnosis and treatment of
PT angiogenesis, inflammatory diseases e.g. psoriasis, cancers and
PT osteoporosis -
XX
PS Disclosure; Page 41; 132pp; English.
XX
XX The present invention relates to enhanced LM609 grafted antibodies
exhibiting selective binding affinity to alphaVbeta_3 integrin or
CC their functional fragments. The antibodies or their functional
CC fragments can be used in the diagnosis and treatment of
CC alphaVbeta_3-mediated diseases such as angiogenesis, inflammatory
CC diseases (such as psoriasis and chronic articular rheumatism),
CC disorders associated with inappropriate or inopportune invasion of
CC vessels (such as diabetic retinopathy, neovascular glaucoma and
CC cancer disorders such as tumours and Kaposi's sarcoma), retinal
CC diseases (such as macular degeneration), restenosis and
XX osteoporosis.

PT integrin - and related grafted antibodies based on murine monoclonal
PT LM609, also related nucleic acid, used to treat, prevent or diagnose
PT angiogenesis or restenosis
XX
XX Claim 62: Page 41; 129pp; English.
XX
XX AAW76007-W76040 are protein fragments of the grafted monoclonal antibody
CC LM609 heavy and light chain variable region. LM609 and the antibody
CC vitaxin bind selectively to integrin alphavbeta3 and can be used to
CC inhibit binding of alphavbeta3 to a ligand and thus block
CC integrin-mediated signal transduction. This is useful in the treatment,
CC prevention and diagnosis of alphavbeta3-mediated disease, specifically
CC angiogenesis and restenosis (but also e.g. (non-)immune inflammation,
CC diabetic retinopathy, neovascular glaucoma, cancer, psoriasis,
CC rheumatoid arthritis, macular degeneration, osteoporosis etc.). The
CC antibodies contain non-murine framework regions so are suitable for use
CC in humans. Enhanced types of LM609 have affinity more than 90 times
CC greater than that of parent the parent antibody.

RL Cell Motil. Cytoskeleton 26:227-238(1993).
CC -!- FUNCTION: CALCIUM-SENSITIVE PROTEIN WHICH REVERSIBLY BLOCKS THE
CC BARBED ENDS OF ACTIN FILAMENTS BUT DOES NOT SEVER PREFORMED ACTIN
CC FILAMENTS. MAY PLAY AN IMPORTANT ROLE IN MACROPHAGE FUNCTION. MAY
CC PLAY A ROLE IN REGULATING CYTOPLASMIC AND/OR NUCLEAR STRUCTURES
CC THROUGH POTENTIAL INTERACTIONS WITH ACTIN. MAY BIND DNA. UNCAPPING
CC OCCURS EITHER WHEN CA(2+) FALLS OR WHEN THE CONCENTRATION OF
CC POLYPHOSPHOINOSITIDE RISES, BOTH AT LOW AND HIGH CA(2+).
CC -!- SUBCELLULAR LOCATION: NUCLEAR, CYTOPLASMIC AND SECRETED. NUCLEAR
CC GCAP39 REDISTRIBUTES THROUGHOUT THE CYTOPLASM DURING MITOSIS AND
CC IS EXCLUDED FROM REGIONS CONTAINING CHROMOSOMES.
CC -!- TISSUE SPECIFICITY: PRESENT IN A LARGE VARIETY OF TISSUES AND IS
CC PARTICULARLY ABUNDANT IN KIDNEY AND LUNG.
CC -!- PTM: PHOSPHORYLATED. NUCLEAR GCAP39 IS MORE HIGHLY PHOSPHORYLATED
CC THAN CYTOPLASMIC GCAP39.
CC -!- SIMILARITY: BELONGS TO THE VILLIN/GELSOLIN FAMILY.
CC -!- SIMILARITY: CONTAINS 3 GELSOLIN-LIKE REPEATS.
CC -!- CAUTION: THIS PROTEIN WAS ORIGINALLY THOUGHT TO BE A DNA-BINDING
CC PROTEIN WITH A HELIX-LOOP-HELIX DOMAIN.

XX Humanised antibody, Vitaxin, that binds selectively to alphavbeta3
PT integrin - and related grafted antibodies based on murine monoclonal
PT LM609, also related nucleic acid, used to treat, prevent or diagnose
PT angiogenesis or restenosis
XX
PS Claim 62; Page 43; 129pp; English.
XX
CC AAW76007-W76040 are protein fragments of the grafted monoclonal antibody
CC LM609 heavy and light chain variable region. LM609 and the antibody
CC vitaxin bind selectively to integrin alphavbeta3 and can be used to
CC inhibit binding of alphavbeta3 to a ligand and thus block
CC integrin-mediated signal transduction. This is useful in the treatment,
CC prevention and diagnosis of alphavbeta3-mediated disease, specifically
CC angiogenesis and restenosis (but also e.g. (non-)immune inflammation,
CC diabetic retinopathy, neovascular glaucoma, cancer, psoriasis,
CC rheumatoid arthritis, macular degeneration, osteoporosis etc.). The
CC antibodies contain non-murine framework regions so are suitable for use
CC in humans. Enhanced types of LM609 have affinity more than 90 times
CC greater than that of parent the parent antibody.

XX
XX Disclosure; Page 42; 132pp; English.
XX
XX The present invention relates to enhanced LM609 grafted antibodies
CC exhibiting selective binding affinity to alphavbeta_3 integrin or
CC their functional fragments. The antibodies or their functional
CC fragments can be used in the diagnosis and treatment of
CC alphavbeta_3-mediated diseases such as angiogenesis, inflammatory

CC diseases (such as psoriasis and chronic articular rheumatism),
CC disorders associated with inappropriate or inopportune invasion of
CC vessels (such as diabetic retinopathy, neovascular glaucoma and
CC cancer disorders such as tumours and Kaposi's sarcoma), retinal
CC diseases (such as macular degeneration), restenosis and
CC osteoporosis.

```

PT Humanised antibody, Vitaxin, that binds selectively to alphavbeta3
PT integrin - and related grafted antibodies based on murine monoclonal
PT LM609, also related nucleic acid, used to treat, prevent or diagnose
XX angiogenesis or restenosis
XX
XX Claim 62; Page 41; 129pp; English.
XX
XX AAU76007-W76040 are protein fragments of the grafted monoclonal antibody
XX LM609 heavy and light chain variable region. LM609 and the antibody
XX vitaxin bind selectively to integrin alphavbeta3 and can be used to
XX inhibit binding of alphavbeta3 to a ligand and thus block
XX integrin-mediated signal transduction. This is useful in the treatment,
XX prevention and diagnosis of alphavbeta3-mediated disease, specifically
XX angiogenesis and restenosis (but also e.g. (non-)immune inflammation,
XX diabetic retinopathy, neovascular glaucoma, cancer, psoriasis,
XX rheumatoid arthritis, macular degeneration, osteoporosis etc.). The
XX antibodies contain non-murine framework regions so are suitable for use
XX in humans. Enhanced types of LM609 have affinity more than 90 times
XX greater than that of parent the parent antibody.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

 CC -!- FUNCTION: MAY PLAY A CRITICAL ROLE IN THE DEVELOPMENT OF RESPIRATORY CONTROL MECHANISMS AND IN THE NORMAL GROWTH AND MATURATION OF THE LUNG.
 CC -!- SUBCELLULAR LOCATION: Nuclear (Potential).
 CC -!- TISSUE SPECIFICITY: TRANSIENT EXPRESSION IN VENTROLATERAL REGIONS OF THE DEVELOPING NEURAL TUBE AND HINDBRAIN.
 CC -!- SIMILARITY: CONTAINS 1 HOMEBOX DOMAIN.
 CC -!- SIMILARITY: CONTAINS 2 LIM DOMAINS. THE LIM DOMAIN BINDS 2 ZINC IONS.

XX Humanised antibody, Vitaxin, that binds selectively to alphavbeta3
PT integrin - and related grafted antibodies based on murine monoclonal
PT LM609, also related nucleic acid, used to treat, prevent or diagnose
PT angiogenesis or restenosis
XX
PS Claim 62; Page 43; 129pp; English.
XX
XX AAW76007-W76040 are protein fragments of the grafted monoclonal antibody
CC LM609 heavy and light chain variable region. LM609 and the antibody
CC vitaxin bind selectively to integrin alphavbeta3 and can be used to
CC inhibit binding of alphavbeta3 to a ligand and thus block
CC integrin-mediated signal transduction. This is useful in the treatment,
CC prevention and diagnosis of alphavbeta3-mediated disease, specifically
CC angiogenesis and restenosis (but also e.g. (non-)immune inflammation,
CC diabetic retinopathy, neovascular glaucoma, cancer, psoriasis,
CC rheumatoid arthritis, macular degeneration, osteoporosis etc.). The
CC antibodies contain non-murine framework regions so are suitable for use
CC in humans. Enhanced types of LM609 have affinity more than 90 times
CC greater than that of parent the antibody.

XX Enhanced LM609 grafted antibodies exhibiting selective binding affinity
PT to alpha(V)beta(3) integrin, useful in the diagnosis and treatment of
PT angiogenesis, inflammatory diseases e.g. psoriasis, cancers and
PT osteoporosis -
XX
XX Disclosure; Page 43; 132pp; English.
XX
XX The present invention relates to enhanced LM609 grafted antibodies
CC exhibiting selective binding affinity to alphavbeta3 integrin or
CC their functional fragments. The antibodies or their functional
CC fragments can be used in the diagnosis and treatment of
CC alphavbeta3-mediated diseases such as angiogenesis, inflammatory

CC diseases (such as psoriasis and chronic articular rheumatism),
CC disorders associated with inappropriate or inopportune invasion of
CC vessels (such as diabetic retinopathy, neovascular glaucoma and
CC cancer disorders such as tumours and Kaposi's sarcoma), retinal
CC diseases (such as macular degeneration), restenosis and
CC osteoporosis.

 PT angiogenesis or restenosis

XX PS Claim 62; Page 41; 129pp; English.

XX CC AAW76007-W76040 are protein fragments of the grafted monoclonal antibody
 CC LM609 heavy and light chain variable region. LM609 and the antibody
 CC vitaxin bind selectively to integrin alphaVbeta3 and can be used to
 CC inhibit binding of alphaVbeta3 to a ligand and thus block
 CC integrin-mediated signal transduction. This is useful in the treatment,
 CC prevention and diagnosis of alphaVbeta3-mediated disease, specifically
 CC angiogenesis and restenosis (but also e.g. (non-)immune inflammation,
 CC diabetic retinopathy, neovascular glaucoma, cancer, psoriasis,
 CC rheumatoid arthritis, macular degeneration, osteoporosis etc.). The
 CC antibodies contain non-murine framework regions so are suitable for use
 CC in humans. Enhanced types of LM609 have affinity more than 90 times
 CC greater than that of parent the parent antibody.

 PT osteoporosis

XX PS Disclosure; Page 41; 132pp; English.

XX CC The present invention relates to enhanced LM609 grafted antibodies
 CC exhibiting selective binding affinity to alphaVbeta_3 integrin or
 CC their functional fragments. The antibodies or their functional
 CC fragments can be used in the diagnosis and treatment of
 CC alphaVbeta_3-mediated diseases such as angiogenesis, inflammatory
 CC diseases (such as psoriasis and chronic articular rheumatism),
 CC disorders associated with inappropriate or inopportune invasion of
 CC vessels (such as diabetic retinopathy, neovascular glaucoma and
 CC cancer disorders such as tumours and Kaposi's sarcoma), retinal
 CC diseases (such as macular degeneration), restenosis and
 CC osteoporosis.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

RT "The genome sequence of Rickettsia prowazekii and the origin of
RT mitochondria";
RL Nature 396:133-140(1998).
CC -1- CATALYTIC ACTIVITY: ATP + L-glutamate + tRNA(Glu) -> AMP +
CC diphosphate + L-glutamyl-tRNA(Glu).
CC -1- SUBUNIT: MONOMER (BY SIMILARITY).
CC -1- SUBCELLULAR LOCATION: Cytoplasmic.
CC -1- SIMILARITY: BELONGS TO CLASS-I AMINOACYL-TRNA SYNTHETASE FAMILY.

RT "Structural organization and differential expression of carrot beta-
RT fructofuranosidase genes: Identification of a gene coding for a
RT flower bud-specific isoenzyme.";
RL Plant Mol. Biol. 28:189-194(1995).
CC -1- FUNCTION: MAY PLAY AN IMPORTANT ROLE IN PHLOEM UNLOADING AND IN
CC STRESS RESPONSE.
CC -1- CATALYTIC ACTIVITY: Hydrolysis of terminal non-reducing beta-D-
CC fructofuranoside residues in beta-D-fructofuranosides.
CC -1- SUBCELLULAR LOCATION: IONICALLY BOUND TO THE CELL WALL.
CC -1- SIMILARITY: BELONGS TO FAMILY 32 OF GLYCOSYL HYDROLASES.

XX Humanised antibody, Vitaxin, that binds selectively to alphavbeta3
PT integrin - and related grafted antibodies based on murine monoclonal
PT LM609, also related nucleic acid, used to treat, prevent or diagnose
PT angiogenesis or restenosis
XX
PS Claim 62; Page 43; 129pp; English.
XX
CC AAW76007-W76040 are protein fragments of the grafted monoclonal antibody
CC LM609 heavy and light chain variable region. LM609 and the antibody
CC vitaxin bind selectively to integrin alphavbeta3 and can be used to
CC inhibit binding of alphavbeta3 to a ligand and thus block
CC integrin-mediated signal transduction. This is useful in the treatment,
CC prevention and diagnosis of alphavbeta3-mediated disease, specifically
CC angiogenesis and restenosis (but also e.g. (non-)immune inflammation,
CC diabetic retinopathy, neovascular glaucoma, cancer, psoriasis,
CC rheumatoid arthritis, macular degeneration, osteoporosis etc.). The
CC antibodies contain non-murine framework regions so are suitable for use
CC in humans. Enhanced types of LM609 have affinity more than 90 times
CC greater than that of parent the antibody.

XX
PS Disclosure; Page 43; 132pp; English.
XX
CC The present invention relates to enhanced LM609 grafted antibodies
CC exhibiting selective binding affinity to alphavbeta_3 integrin or
CC their functional fragments. The antibodies or their functional
CC fragments can be used in the diagnosis and treatment of
CC alphavbeta_3-mediated diseases such as angiogenesis, inflammatory

CC diseases (such as psoriasis and chronic articular rheumatism),
CC disorders associated with inappropriate or inopportune invasion of
CC vessels (such as diabetic retinopathy, neovascular glaucoma and
CC cancer disorders such as tumours and Kaposi's sarcoma), retinal
CC diseases (such as macular degeneration), restenosis and
CC osteoporosis.

 XX XX Enhanced LM609 grafted antibodies exhibiting selective binding affinity
 PT to alpha(V)beta(3) integrin, useful in the diagnosis and treatment of
 PT angiogenesis, inflammatory diseases e.g. psoriasis, cancers and
 PT osteoporosis -
 XX XX

PS Disclosure; Page 42; 132pp; English.

XX The present invention relates to enhanced LM609 grafted antibodies

CC exhibiting selective binding affinity to alphavbeta3 integrin or

CC their functional fragments. The antibodies or their functional

CC fragments can be used in the diagnosis and treatment of

CC alphavbeta3-mediated diseases such as angiogenesis, inflammatory

CC diseases (such as psoriasis and chronic articular rheumatism),

CC disorders associated with inappropriate or inopportune invasion of

CC vessels (such as diabetic retinopathy, neovascular glaucoma and

CC cancer disorders such as tumours and Kaposi's sarcoma), retinal

CC diseases (such as macular degeneration), restenosis and

CC osteoporosis.

US-08-677-599B-13
Sequence 13, Application US/08677599B
Patent No. US20020155117A1
GENERAL INFORMATION:
APPLICANT: Sucia-Foca, Nicole
TITLE OF INVENTION: METHODS FOR DETECTING ORGAN ALLOGRAFT
TITLE OF INVENTION: REJECTION AND USES THEREOF
NUMBER OF SEQUENCES: 23
CORRESPONDENCE ADDRESS:
ADDRESSEE: Cooper & Dunham LLP
STREET: 1185 Avenue of the Americas
CITY: New York
STATE: New York
COUNTRY: USA
ZIP: 10036
COMPUTER READABLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: PatentIn Release #1.0, Version #1.30
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/677,599B
FILING DATE: 08-JUL-1996
CLASSIFICATION: 435
ATTORNEY/AGENT INFORMATION:
NAME: White Esq., John P.
REGISTRATION NUMBER: 28,678
REFERENCE/DOCKET NUMBER: 50161-A
TELECOMMUNICATION INFORMATION:
TELEPHONE: 212/278/0400
TELEFAX: 212/391/0525
INFORMATION FOR SEQ ID NO: 13:
SEQUENCE CHARACTERISTICS:
LENGTH: 14 amino acids
TYPE: amino acid
STRANDEDNESS: single
TOPOLOGY: linear
MOLECULE TYPE: peptide
US-08-677-599B-13

SEARCH REQUEST FORM

Scientific and Technical Information Center

Requester's Full Name: _____ Examiner #: _____ Date: _____
Art Unit: _____ Phone Number 30 _____ Serial Number: _____
Mail Box and Bldg/Room Location: _____ Results Format Preferred (circle): PAPER DISK E-MAIL

If more than one search is submitted, please prioritize searches in order of need.

Please provide a detailed statement of the search topic, and describe as specifically as possible the subject matter to be searched. Include the elected species or structures, keywords, synonyms, acronyms, and registry numbers, and combine with the concept or utility of the invention. Define any terms that may have a special meaning. Give examples or relevant citations, authors, etc., if known. Please attach a copy of the cover sheet, pertinent claims, and abstract.

Title of Invention: _____

Inventors (please provide full names): _____

Earliest Priority Filing Date: _____

**For Sequence Searches Only* Please include all pertinent information (parent, child, divisional, or issued patent numbers) along with the appropriate serial number.*
